renova cases a relocation of the radiation of 3 may be necessary (reflected) for both FODE Indirect the the the optimum isolation curntable from the direct or or speakers or both in loudspeakers. achieve turntable Che.

Placement of the turntable in the corner of a room where the inter-connection of walls, floor and ceiling is structually stronger will in most cases reduce the possiblity of floor vibrations disturbing the turntable. If additional isolation is required from floor vibrations cotton wadding may be inserted into the coils of the three cone shaped chassis suspension springs. Small quantitles should be tried first in each of the three springs and the results bested. If additional cotton wadding is required it may be added until Batisfactory results are optained.

#### ON-OFF SWITCH

check the switch operation with an Ohmmeter while actuating the switch lever by hand. The speed selector knob should be in one of the "ON" (speed) positions. If the switch makes continuity but the actuating lover movement is insufficient to actuate the switch, loosen the screws securing the switch and adjust the switch position cord from power AC the Temove fails to operate, unit the

D. Olmed Condensor Should also be tested relative to the actuating cam. The switch adjustment proceedure should also be followed if the unit fails to shot off. The 0.01mPd condensor should also be test

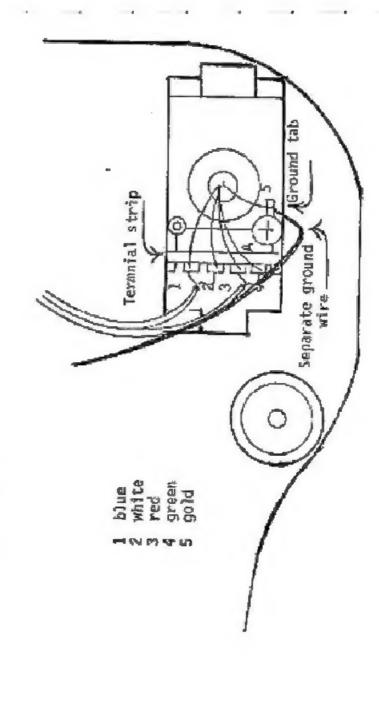

면 3W1tch speakers when the on-off switch be open and should be geplaced. cocurs in the for a short. If a 'popping' noise operated the 0.01mPd

## BLECTRONIC ADJUSTMENTS

6 check that the DC voltage

core with With 22VAC applied between point 2 and 6 check that the DC voltage appearing across C-101 is 30 Volts +10%.
Connect a frequency counter with a low input capacitance to point "A" and adjust the inductance L-101 such that the oscillator frequency is approximately 80kHz by rotating the ferrite core with a non-metalic tool.
With an AC Voltmeter connected to point "B" adjust R-101 carefully to obtain a vulue of 2.0 Volts +0.1 Volts.
If this value cannot be obtained readjust the ferrite pole as

"B" adjust R-101 carefully

described above.

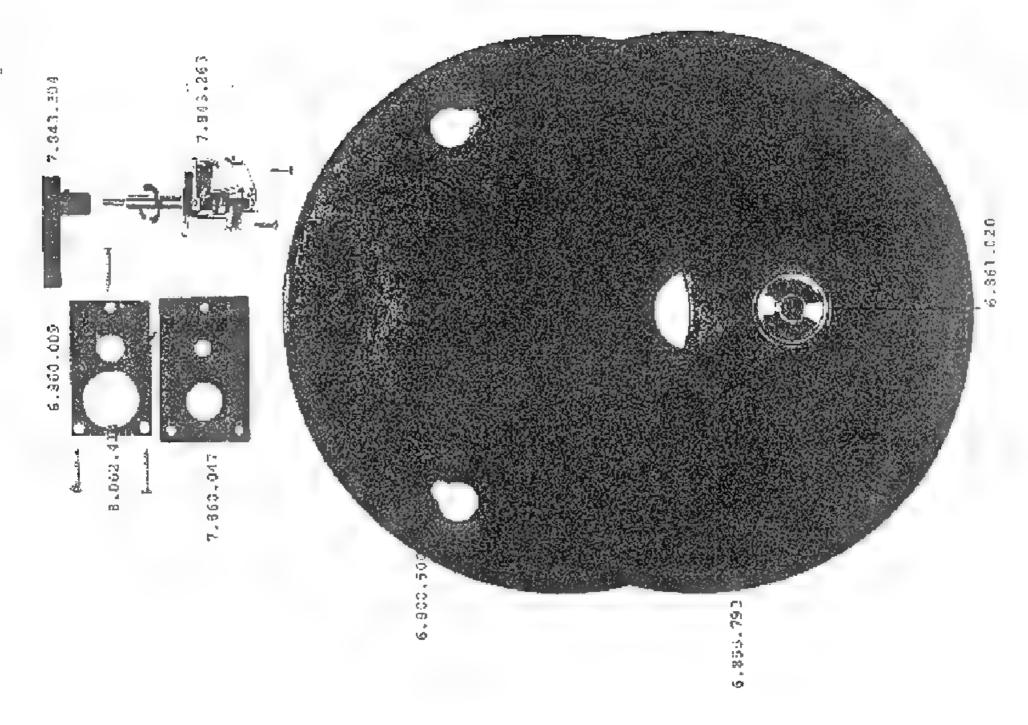

VALUE "B" by 0.2 Volts, i.e. measure obtain 9 direction clockwise 쳐 rease in Voltage at point 1.8±0.1 Volts. of 101-1 30 COXe the decrease

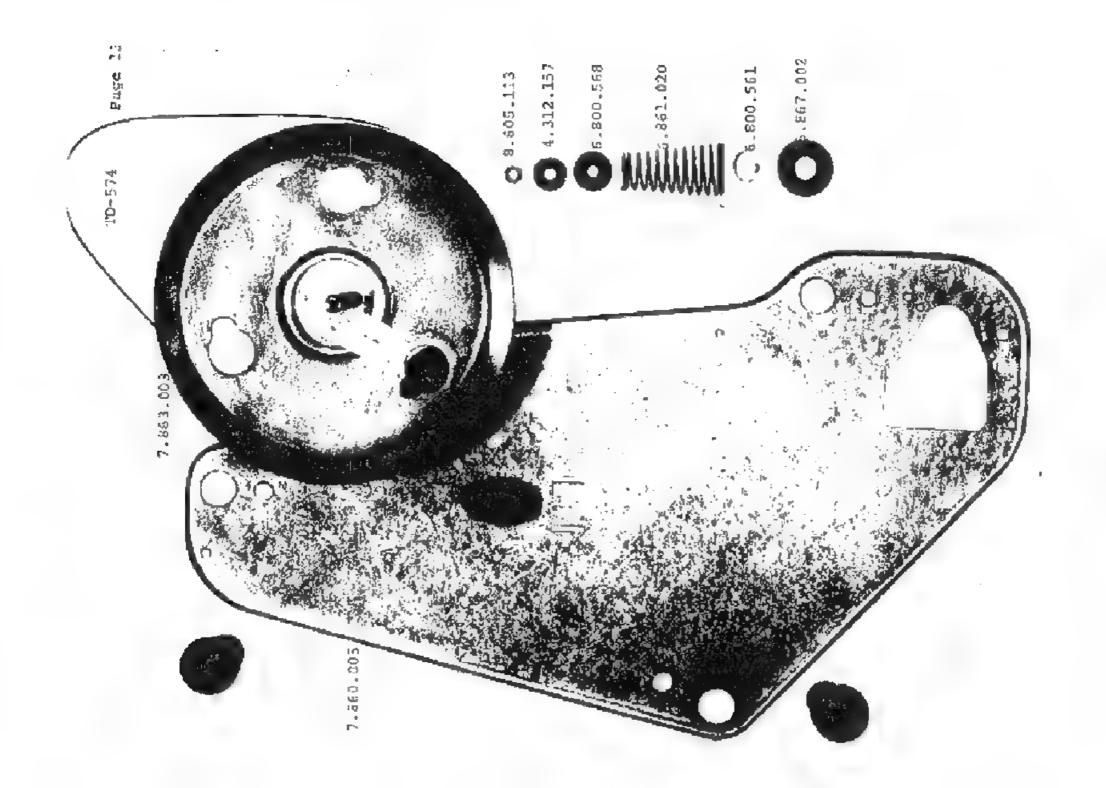

the center spindle and observe correct ensure that the oscillator has been decuned in the arm towards the voltage increases. airection, move the tone

int proceedure is now complete. Ensure that all adjustment tight and replace the plastic cover on the base of the the auto stop process should now be checked with a record in that correct operation has been achieved. The alleganest proceedure The to establish SCROWS are tone arm.
